M.H.

Roger Kingsley Bost, MD

Progress Notes

Encounter Date: 7/27/2017

Physician

Signed

Pediatrics

**Subjective:****Subjective****Patient ID:** M.H. is a 12 y.o. female.

HPI Biologic mom lost custody of her 2 younger daughters in Dec 23, 2016 when the parents were divorcing and biologic dad was accused of incest with one of mom's 2 daughters from her first marriage. The GAL removed mom's daughters because mom was accused of educational abuse of her children for homeschooling them. They were then placed with paternal grandmother who allowed unfettered access of them to their father. M.H. got depressed while there because the dad was sexually molesting her and stayed in her room to avoid dad. She got depressed and started cutting herself and was sent to psych unit at Kennet in Feb 2017 and was started on remeron. Then DFS got her removed and placed in foster care in Feb 6th and stayed there till July 24th 2017 when biologic mom regained custody. She did good in 7th grade and is a year ahead of her peers because of her home schooling success. Her mom wants the remeron stopped now that she is in safe home situation. She also cut her L lower leg on rock while swimming in creek while with foster parents

The following portions of the patient's history were reviewed and updated as appropriate: allergies, problem list, care team and Joint Commission screening.

**Review of Systems**

Constitutional: Negative for activity change, appetite change, fatigue and fever.

HENT: Negative for congestion, dental problem, rhinorrhea and sore throat.

Eyes: Negative for discharge.

Respiratory: Negative for cough and wheezing.

Cardiovascular: Negative for chest pain.
